

COLVENT

Vented Roofing Membrane

REV: 06.07.13

PRODUCT DESCRIPTION

COLVENT is a specially designed SBS-modified bitumen roofing membrane that features an underside ribbon strip design that optimizes stress distribution and vapor diffusion under the membrane.

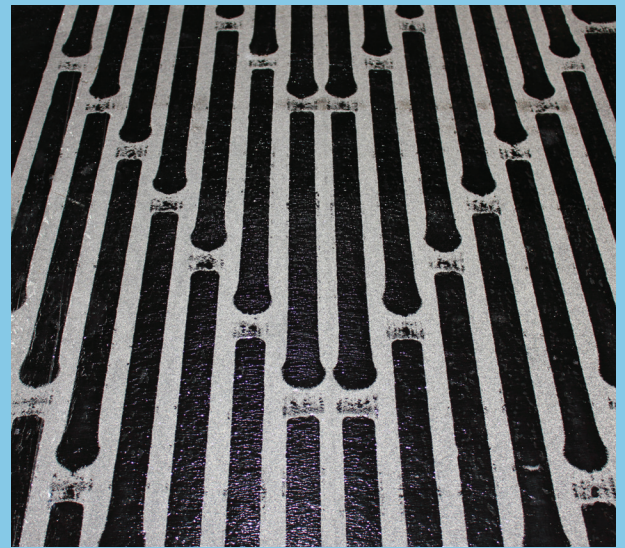

PRODUCT USES

COLVENT venting roof membrane is engineered to reduce blistering associated with moisture-retentive lightweight concrete surfaces.

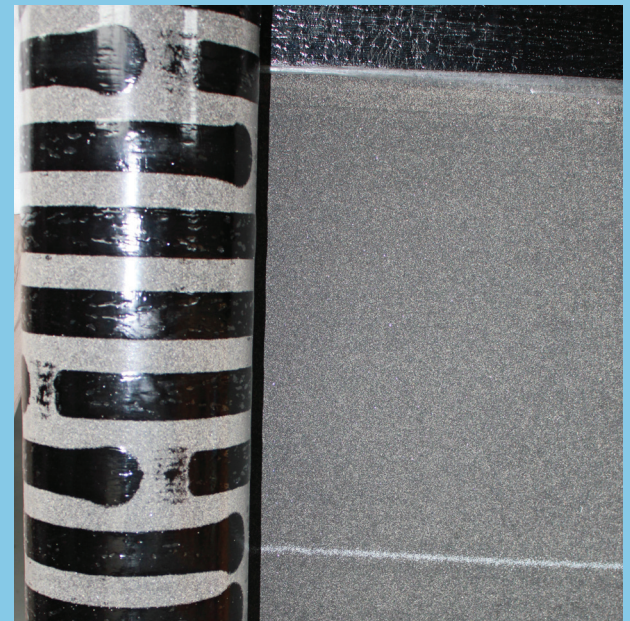

FEATURES & BENEFITS

- SBS membrane and ribbon strip design provides optimum stress distribution and vapor diffusion
- Minimize risks of damage from thermal cycling and blistering
- Eliminates need for cover board when applied to properly prepared substrate
- Specially formulated for hot, humid conditions
- Easy installation reduces time, labor and material costs
- Available as base-ply or granular cap

COLVENT is available in four different configurations that afford flexibility when designing for lightweight concrete roofs.

When the burn-off film is melted away, COLVENT's heat activated ribbon strips are adhered to the substrate.
