Protect Your Investment

LASTOBOND SHIELD HT

Complete protection from ice dams
and wind driven rain, sleet and snow

SOPREMA premium underlayments are your first line of defense against costly ice dams and wind-driven rain, sleet and snow. Our underlayment product line has been specifically engineered to provide superior protection for all types of roof coverings in all areas of the United States.

Why self-adhered?

- Easy to install
- Split-Back Release Liner
- Self-Sealing
- Heat Reflective
- High Tensile Strength
- 100% U.V. Protected
- Up to 90 Days of Exposure

SOPREMA'S LASTOBOND SHIELD HT features an industry leading 90 day exposure window that accommodates construction scheduling and weather delays.

Your roof is the first line of defense against moisture penetration. Why take chances? Be sure to use the best, be sure to use...

LASTOBOND SHIELD HT

Premium Self-Adhered Roof Underlayment Membrane

LASTOBOND SHIELD HT is a high temperature, self-adhesive waterproofing membrane composed of SBS modified bitumen and a tri-laminated woven polyethylene. With its specially developed bituminous formulation, LASTOBOND SHIELD HT is designed to withstand service temperatures up to 240°F (116°C)

LASTOBOND SHIELD HT can be used in many applications:

- Premium protection from severe ice dams
- Under architectural metal roofs
- Roofing in high altitude/Alpine regions
- Roofing in desert climates
- As an air/vapor barrier
- As a temporary roof

LASTOBOND SHIELD HT - Easy Installation

Roll out approximately 10ft (3m) of membrane and peel back the first 3ft (1m) of silicone release film.

Adhere the exposed part to the substrate and unroll the remaining membrane as far as possible.

Once the membrane is in place, peel off the silicone release film diagonally while holding the membrane tight.

For vertical application, start at the top.

The roof is protected.

SOPREMA premium underlayments are ideal for many roof coverings.
