

VEGETATED

SOPRANATURE SPIRAPAVE®

PAVER & DECK SUPPORT

SpiraPave® pedestal is based on a unique 'step' design for supporting raised pavers and timber decking. It creates a cavity to conceal services, improves heat and sound insulation, facilitates rapid surface drainage and allows easy access to waterproofing and services. It also reduces efflorescence and algae growth and reduces paving installation costs.

SpiraPave® is a height and slope-adjustable pedestal engineered to support pavers and decking to reduce material, construction and lifecycle costs. Height range of SpiraPave® is 0.5 in to 3 in (12 mm to 74 mm), in 0.04 in (1mm) increments. Additional height of 1.75 in (45 mm) is obtained with the use of a SpiraPave Extender TE45. SpiraPave® is used in areas such as balconies, swimming pool surrounds and courtyards. Accessories include top/bottom slope-correctors, spacer tabs, height extender, base plate and joist holders.

BENEFITS

- Low minimum height of 0.5 in (12 mm)
- Precise 0.04 in (1 mm) height adjustment
- Top and/or bottom slope correctors
- Easy to install, cost effective and lightweight
- Made from 100% recycled materials
- Supports Green Building certification

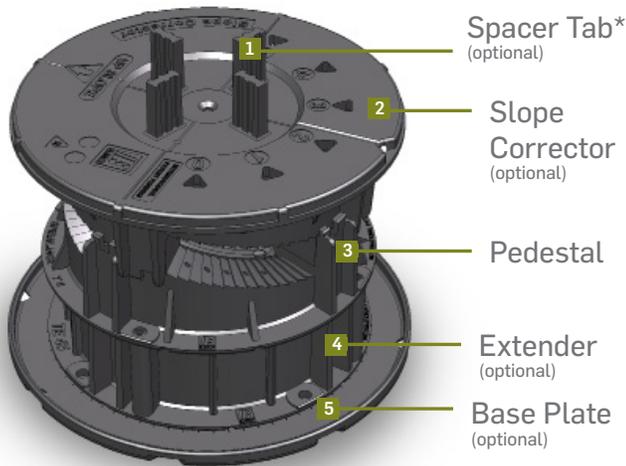

SpiraPave may be used with VersiPave or VersiJack pedestals, as an accessory for additional height adjustments.

SPIRAPAVE PEDESTAL

*or Joist Holder

1 SPACER TAB (W962, W986)

Spacer tabs with thickness from 0.1 in to 0.4 in (2mm to 10mm) cater for different gap sizes between pavers.

2 SLOPE CORRECTOR (W963)

Provide for slope compensation up to 5%, keeping pavers level and upright.

3 PEDESTAL

4 EXTENDER (W953)

Allows pedestals to reach a desired height adjustment with minimal effort.

5 BASE PLATE
